THE SCIENCE BEHIND HARDWORKING COMFORT™

Xpert products are crafted using knowledge from generations working in the workwear industry. We realise that you work in challenging environments, undertaking demanding work, so we create products to help you cope with everything the day throws at you.

We take the time to make the right design decisions to make sure products perform as they should. Xpert IQ™ focuses on function and performance using first-hand knowledge of your world.

All Xpert products are developed by our in-house team and monitored from start to finish, so you can be sure that when you wear them they will perform. We don't rest until our products are ready to be put to work. We believe a quality product should do its job and do it properly – and not just once.

Xpert products are constructed to last, tested to extremes and designed with practical features that are built to perform. We create products, based on our experience, to meet the needs of our hard workers.

Visit xpertworkwear.com
to discover more about Xpert IQ™

ENGINEERED WITH

THE ULTIMATE IN ENDURING COMFORT

Xpert™ products featuring Comfort-X™ technology are manufactured from materials that ensure your comfort, and aim to reduce stress, fatigue, and burnout.

SPORTS TECHNOLOGY FOR WORK

Xpert™ products with Active-X™ technology feature ultra-lightweight and breathable fabrics and compounds that are commonly used in innovative sports gear. These features facilitate free movement and help maintain optimum climate control, ensuring all-day comfort while you work.

WATERPROOF AND BREATHABLE MEMBRANE

Xpert™ Dry-X™ is a Waterproof and Breathable Membrane system used in workwear and footwear. With Dry-X™, the holes in the membrane are so small that sweat vapour can pass out so the workwear is breathable, but a water molecule cannot pass in so you will stay dry and comfortable.

WEIGHT REDUCTION TECHNOLOGY

Light-X™ technologies use cutting edge composite products to replace traditional manufacturing methods. You can be assured of maximum safety and yet minimum weight, with any Light-X™ products.

MAXIMUM STRENGTH

Tough-X™ technologies use tried-and-tested manufacturing methods to make sure products endure the rigours of a demanding work life. With no compromise in craftsmanship, choose Tough-X™ for outstanding performance and durability.

STAY WARM IN EXTREME TEMPERATURES

Therm-X™ technologies are built to withstand severe cold climatic conditions, we recommend Therm-X™ products in sub-zero temperatures, as low as -50°C.

SUSTAINABILITY

As a manufacturer of workwear and footwear we are always looking for ways to reduce our environmental impact and develop products that don't harm the planet.

As a brand we want to keep the environment in focus. So far we have achieved this through:

- **Garment Packaging Bags** – All our Xpert workwear is packaged in at least 30% recycled poly bags. These are also fully recyclable.
- **Boot Boxes** – All our Xpert boots are packaged in 100% recycled cardboard boxes. In addition, we are transitioning away from glue, so soon all our boxes will also be glue-less.
- **CO² Emissions** – We have moved over 85% of our production away from the Far East and nearer to home, and we will continue to shorten our supply chain. Shipping has huge environmental impact, so we've already reduced emissions from 4.09 Tonnes CO² per container, to just 2.51 Tonnes.
- We continue to find ways to reduce the environmental impact of components within our finished products, for example using recycled plastic in our footwear membrane systems, and using an environmentally friendly catalyst of water blown polyurethane polyester in our safety boot soles.

WHERE HARD WORK MEETS RESPONSIBLE ACTION

Xpert Workwear is proud to join the global movement toward net-zero, taking real steps today to protect tomorrow.

THE MANUFACTURING PROCESS

DESIGN AND R&D

All our Xpert products are designed for the Agricultural workplace. We believe if its tough enough for farmers, its tough enough for anyone. We listen to feedback from our customers, observe market trends, and develop products specific to the consumers' needs.

SOURCING AND PROCUREMENT

We prioritise product quality and environmental impact over price. We only make quality, ethically sourced products, and all our workwear is sourced from OEKO-TEX approved companies. You can find out more about this standard at testex.com/en/oeko-tex/standard-100

PRODUCTION

We strictly manage production with in-line quality control and final end-of-line quality control, so that we meet globally recognised AQL (Acceptance Quality Limit) standards. Our dedicated team of Quality Controllers visits our factories and ensure high production standards are maintained.

CONTINUOUS IMPROVEMENT

Once an Xpert product is launched, our work is not done. We monitor products in the working environment and are always looking for ways to improve comfort, durability and performance.

#HARDWORKINGCOMFORT is our benchmark.

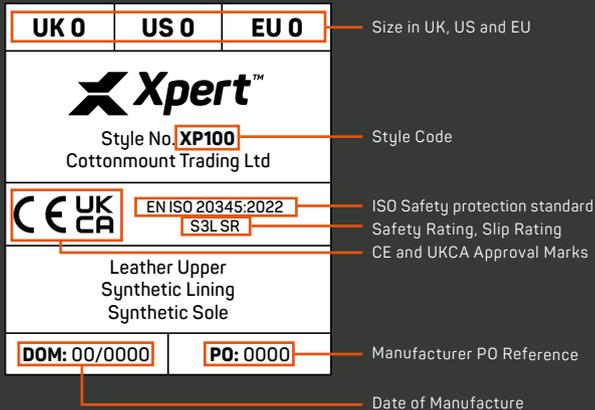

SAFETY RATINGS EXPLAINED

SAFETY FOOTWEAR - EN ISO 20345

All Xpert safety footwear meets the requirements of European Standard: EN ISO 20345. This testing standard ensures that our safety footwear meets the requirements (innocuousness, comfort, robustness and protection against the risks claimed) of the Personal Protective Equipment (PPE) regulation EU 2016/425 as brought into UK Law and amended.

In addition, all our safety footwear is accompanied with an EU Declaration of Conformity, EU Type Examination Certification, and UK Declaration of Conformity UKCA where required.

There are varying safety classes within our product range, the safety class depends on the features on the footwear, and the footwear style. We have the applicable footwear for all work conditions, and you can easily see the safety class of footwear by checking the label inside the boot:

OCCUPATIONAL FOOTWEAR - EN ISO 20347

Xpert also offers non-safety footwear which meets the requirements of European Standard: EN ISO 20347. This standard covers the specifications for what is known as occupational footwear, and provides a specification baseline for quality footwear that is not required to have steel or composite toe caps.

Footwear marked EN ISO 20347 will have:

- Antistatic, fully enclosed and energy absorbing heel.
- Water absorption and penetration resistance.
- Cleated sole.
- Outsole resistance to fuel oil.

GRIP RATINGS

Safety Footwear must be tested for grip on forward flat slip, and forward heel slip, in various test circumstances. The grip rating on all Xpert and Swampmaster footwear is clearly marked on the label inside or on the sole of the boot.

SRA

SRB

SRC

ISO20345:2011 Markings

Ø

SR

ISO 20345:2022 Marking. Not able to be tested for slip resistance, as it offers studs or spikes, or is for use within special workplaces and is therefore not applicable.

ISO 20345:2022 Marking. Slip resistant tested on ceramic tile with glycerol

SAFETY CATEGORIES

There is a comprehensive range of tests carried out within the ISO certification process. This test criteria is grouped into simplified, standardised safety categories, that ensure key criteria are met. The safety rating on all Xpert and Swampmaster footwear is clearly marked on the label inside or on the sole of the boot.

WATERPROOF WORKWEAR

Swampmaster waterproof workwear is certified to European Standard: EN343:2019. This is the European standard that applies to garments designed for use in adverse weather conditions, including rain, fog and humidity. There is two key elements to the standard:

-  Water Penetration Resistance
-  Water Vapour Resistance
-  Optional Rain tower test - X indicates 'not tested' R indicated 'tested'

WATER PENETRATION RESISTANCE

This is measured in Pascals (Pa) and is the hydrostatic pressure held by a material.

WATER VAPOUR RESISTANCE

This is measured in $m^2 \cdot Pa / W$ and dictates the breathability of the material. The lower the resistance, the more breathable the item.

To make them easily understood, both these values can achieve Class 1 to 4 protection level. (1-Lowest – 4-Highest)

In addition to water penetration and breathability, our Swampmaster waterproofs are tested for tensile strength, tear strength, bursting strength, and seam strength. You can be assured of ultimate comfort and durability with our waterproof workwear range.

APPAREL SIZING

At Xpert we go to great lengths to ensure our workwear is accurate fitting, and that the fit of the garment is suitable for the application it will be used in.

Inconsistent sizing can be frustrating, so our quality team ensure uniformity across our whole garment range. Wherever possible, we recommend you try on the clothing first, as its important you get the size that works for you so you can maximise your workwear's comfort and safety features.

XPERT FITS EXPLAINED

MODERN FIT Our modern fit is the perfect mid-point between functionality and style. Generous enough to give your body space to breathe and freedom to work, fitted enough to keep you looking well-turned-out. Hardworking Comfort™ is our mantra when designing our Modern Fit range.

CLOSE TAPERED FIT Our close tapered fit garments feature 360° stretch fabrics, allowing a really fitted look while maintaining optimum functionality and flexibility. Advanced fabrics, used in close tapered fit garments, give the wearer the ultimate experience in comfort, breathability, and durability.

ADJUSTABLE FIT Reserved for our Junior range, adjustable fit garments are designed to help you get more life out of junior garments. Young workers grow up fast, so we've built in expansion features to allow our garments to increase at growth points while still maintaining a great fit.

Where it says '**To Fit**' in a sizing table, this means your actual body measurement, taken close to the body with a traditional yellow tailor's measuring tape. The tape should be neat around your body but not tight. Always order one size larger if you are unsure or if your measurements fall between two sizes.

MEASURING YOURSELF

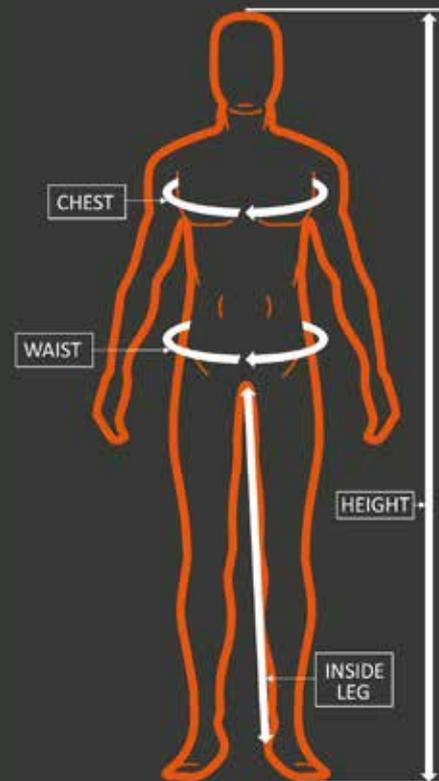

If possible, get someone to help you. Once you've taken your measurements, save these somewhere, because as an adult your measurements don't change much.

CHEST Measure below the armpits, around the widest part of the chest.

WAIST Measure just below the navel, above the hips.

LEG Measure from the crotch to the ankle, where your trouser is normally worn on the shoe.

HEIGHT For children, measure the child's height, head-to-toe to determine which age group they sit within and then buy the clothes size accordingly.

FOOTWEAR SIZING

SAFETY FOOTWEAR

All Xpert safety footwear is true to size, so whatever your normal shoe-size is, this is what you should be in Xpert. Safety footwear is wide fitting, which allows space for a thicker work sock if required.

NON-SAFETY FOOTWEAR

Xpert non safety footwear is true to size, so whatever your normal shoe-size is, this is what you should be in Xpert. All Xpert Non-safety footwear is wide fitting, which allows space for a thicker work sock if required. Some Heritage styles come in standard width, for a dressier look than the safety boots.

WHAT SIZE BOOTS SHOULD I BUY?

We all have a fair idea what size footwear we normally buy, but its always important to check that your boots fit just right. To check your boots are the correct size, loosen the fastenings/ laces and push your foot forward until your toes are touching the front of the boot. If they are the correct size, you should have approximately a fingers width between your heel and the back of the boot. Remember that new boots are slightly stiffer, they will soften during the wear-in phase, so bear this in mind when you choose your boots.

The size chart to the right will assist you. Foot length is the length in millimetres from the tip of your longest toe to your heel.
